Evaluation

Current Status

UBS has demonstrated significant progress towards its energy transition goals, particularly in terms of renewable procurement and energy efficiency programs. The company has set ambitious targets to achieve 100% renewable electricity globally, which it has already met. Additionally, there is evidence of increasing the level of renewable electricity consumed since the baseline year 2019, primarily through recognized renewable electricity instruments, long-term agreements, and the purchase of renewable energy credits.

Key Findings

- **Renewable Procurement**: UBS has been actively procuring renewable energy, including through contracts like vPPA/PPA and purchasing RECs.
- **Energy Efficiency Programs**: There is no specific information available regarding detailed energy efficiency programs implemented by UBS.
- **Capital Allocation**: While not explicitly stated, the focus on renewable energy suggests that capital allocation is directed towards investments in low-carbon technologies.

Strengths

- **Commitment to Renewable Energy**: UBS's commitment to achieving 100% renewable electricity globally sets a high standard for sustainability.
- **Progress Towards Targets**: Demonstrated progress in meeting its renewable procurement targets, indicating strategic alignment with environmental objectives.

Areas for Improvement

- **Detailed Energy Efficiency Programs**: Lack of specific details about energy efficiency initiatives could indicate gaps in operational practices aimed at reducing overall energy consumption.
- **Long-Term Commitments**: While the company has set clear targets, there may be room for more robust long-term commitments and reporting on actual implementation efforts.

Recommendations

- **Enhance Reporting on Energy Efficiency Programs**: To better understand UBS's strategies and achievements in energy efficiency, additional data should be collected and reported on specific energy-saving measures taken.
- **Strengthen Long-Term Commitments**: Encourage the development of clearer, longer-term plans for sustainable business practices, including regular updates on progress toward renewable energy targets.
- **Integration of Sustainable Practices Across Operations**: Ensure that sustainability considerations are integrated into all areas of business operations, not just those directly related to renewable energy
